PROJECT STUDY

Product Strategy 2035
Growth Strategy for High Performance Metals

Final report

Consulting team: Member 1, Member 2, Member 3, Member 4 | Technical University of Munich
November 2026

Table of contents

Executive summary 3

1 Introduction, central question and approach 4

2 Phase I: Global metals data foundation 5

- 2.1 Model architecture and sources 5
- 2.2 Nickel and nickel alloys 5
- 2.3 Cobalt alloys 5
- 2.4 Zirconium 5
- 2.5 Specialty stainless steels 5
- 2.6 Aluminium and copper products 5
- 2.7 Additive manufacturing powders and welding consumables 5
- 2.8 Prices and supply risk synthesis 5

3 Phase II: Sector analyses 6

- 3.1 Automotive 6
- 3.2 Oil and gas 6
- 3.3 Environmental and energy technology 6
- 3.4 Aerospace 6
- 3.5 Chemical process industry 6
- 3.6 Electronics and electrical engineering 6
- 3.7 Medical technology 6
- 3.8 Cross sector competitor map 6

4 Phase III: From market analysis to strategy 7

5 Conclusion 8

6 Appendix: assumptions and model documentation 9

- Test section 9

4 Phase III: From market analysis to strategy

5 Conclusion

6 Appendix: assumptions and model documentation

Test section

Global nickel mine output reached about 3.9 Mt in 2025 [1], and Indonesia supplied roughly two thirds of that volume, which shapes every price discussion in this report. This is short. It has a dash — and a semicolon; here.
